PROJECTS

BOOTSTRAP

Website Design

- Create a responsive grid system for the website with the implementation of Bootstrap 5 for the framework.
- Design a mobile-first website that impliments responsive navigation with a search bar and login.
- Conctruct multiple pages from a mock design through Bootstrap components.
- Inclusion of SASS, for ease of customizing CSS styles.
- Establishment of a Git repository, Node and NPM set up.
- Introduction of JavaScript for interactive components of web page such as a navigation and login.

REACT

Website Application

- Convert Bootstrap pages into presentational and Container Components.
- Integrate Header and Footer with a React Router for navigation through pages.
- Create controlled forms to initialize the responsiveness of form validation and error messages.
- Inclusion of a login modal through the use of a uncontrolled form.
- Add Transitions and Animations elements for the web application.

REACT NATIVE

Mobile Application

- Create a custom side drawer with a stack navigator for mobile components.
 - Object destructuring to create a listed element.
 - Create an activity indicator that will show a loading component while data is being fetched from the server.
 - Set up actions and a reducer to handle and track a new favorite selection through Redux.
 - Create a form using Switch, Picker, and DatePicker and Store the received data.
-

EXPERIENCE

NUCAMP

Orlando, FI

January 2020 - Present

- Front End Development Bootcamp.
- Create responsive websites using Bootstrap grids, CSS and JavaScript components
- Establish a development environment, CASS and a local repository; Implement a NPM package manager and Git.
- Develop a Single Page Application with a RESTful development server.
- Create a multiplatform mobile application that can handle local and server-generated notifications.
